Product data

Close-coupled vertical in-line pumps

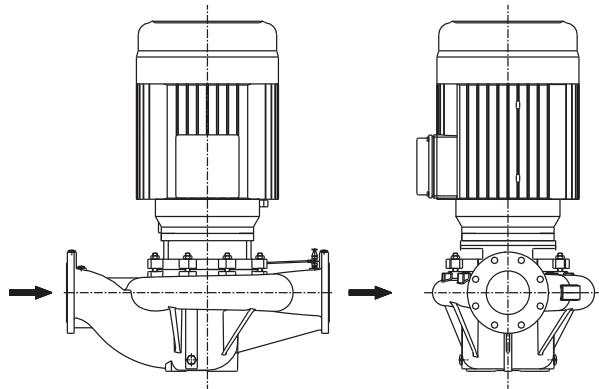

LVI

Introduction

LVI are non-self priming, single-stage, vertical in-line, close-coupled type centrifugal pumps having radial suction and radial discharge port.

Applications

- Cooling & heating systems.
- Pressure boosting systems.
- Industrial applications.
- Water supply.
- Fire protection systems.

Features & benefits

Following are the main features and benefits offered by the LVI pumps.

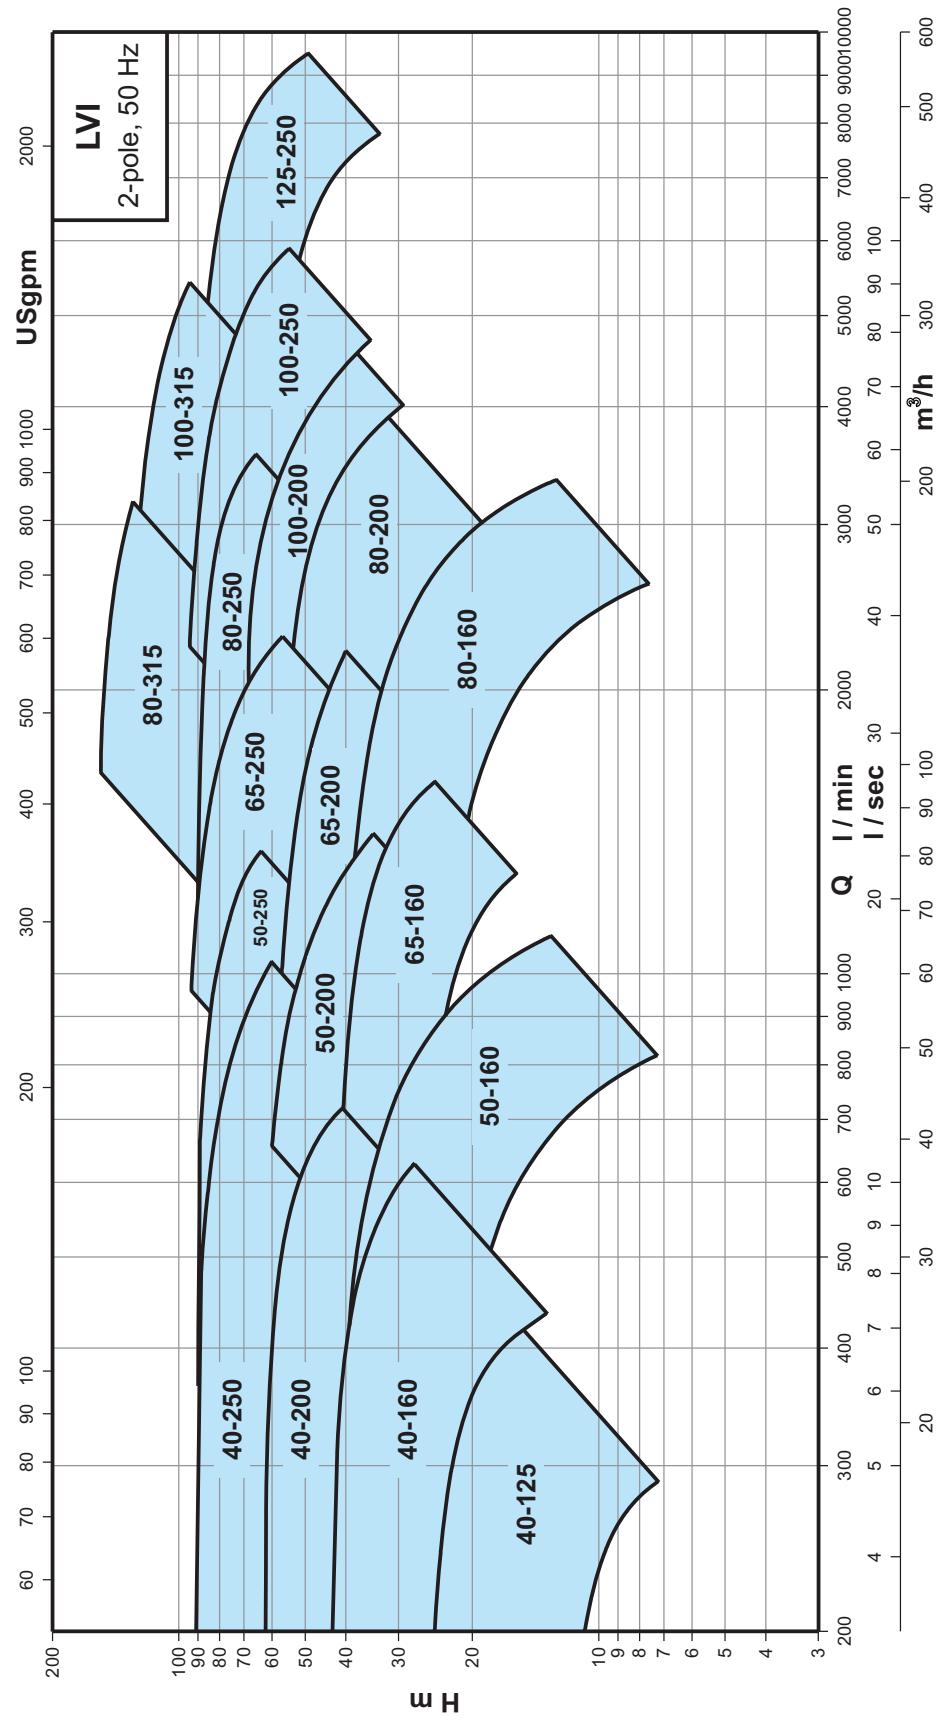

- Vertical in-line pumps offer largest floor space saving compared to End suction & Horizontal split case pumps.
- The in-line construction offers easy pipe work. Pipe hangers sized for the weight of the pump, piping & fittings offers adequate supports for most installations.
- The inlet passages of the volute casing are of liberal size & have flow straightening vanes to provide excellent suction performance and extremely quiet operation.
- Standard flanges for suction and discharge ports will be PN 16 as per DIN standard EN 1092-2 and PN 25 as per DIN standard EN 1092-2. ANSI 125 and ANSI 250 as per ASME B16.1 are available on request.
- These pumps are close coupled pumps with TEFC squirrel cage induction motors with main dimensions complying to IEC standards.
- These pumps are available with mechanical shaft seal only.

- These pumps have the discharge range up to 600 m³/hr and head range up to 150 metres. Motor ratings are up to 132 kW.
- The pump impellers are dynamically balanced to grade 6.3 of ISO 1940.
- These pumps are available with our standard range of motors complying to EFF2 motors. They can also be supplied with EFF1 motors on request

* Wear ring is available on request only.

Construction

Close-coupled vertical in-line pumps

LVI

Construction features

Volute casing

The volute casing of the pumps are designed to be robust in construction to take the undue stresses offered by the pipe work. They have a radial suction port and radial discharge port. Standard flanges are PN 16 as per EN 1092-2 and PN 25 as per DIN standard EN 1092-2. ANSI 125 and ANSI 250 as per ASME B16.1 are available on request.

The volute casing are provided with a priming & drain hole closed by plugs.

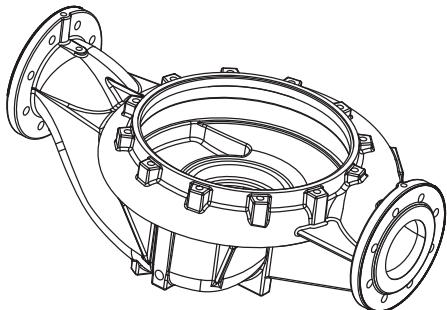

Fig. 1 Volute casing

Shaft

As shown in the figure an integral single shaft is provided for all pumps from 112 to 180 frame (see fig. 2). Remaining pumps are provided with stub shaft as shown below (see fig. 3) which has two drilled holes for set screws in the coupling.

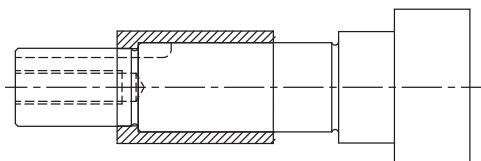

Fig. 2 Integral shaft pump

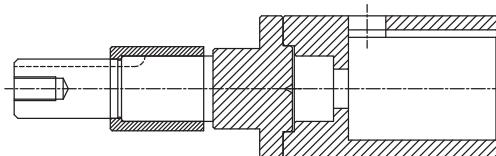

Fig. 3 Stub shaft pump

Impeller

The impellers are closed impellers with extra smooth surface finish and machined completely from outside to ensure high efficiency.

The direction of rotation of impeller is clock wise when viewed from the motor driving end.

They are dynamically balanced to grade 6.3 of ISO 1940.

All impellers can be trimmed to adopt them for the duty point requested by the customer.

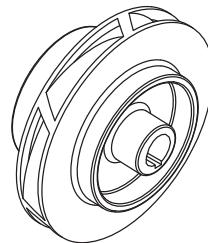

Fig. 4 Impeller

Test pressure

All pumps are hydrostatic tested for leakage as per the following test pressure using water containing corrosion inhibitor at room temperature.

Pressure rating	Operating pressure	Test pressure
PN 16	16 bar	24 bar
PN 25	25 bar	37.5 bar
ANSI 125	125 psi	188 psi
ANSI 250	250 psi	375 psi

Motors

The motors are totally enclosed fan cooled squirrel cage induction motors.

The standard motors with the pumps are all as per EFF2 efficiency. EFF1 efficiency motors can be available on request.

Motors with frame sizes from 71 to 160 are with aluminum construction. The remaining are cast iron construction.

Motor data

Ratings: up to 132 kW

Rated speed: 2900, 1450, 960 rpm

Enclosure class: IP 55

Insulation class: F

Nominal voltage (tolerance +5% / -10%): 50 Hz, 3 phase, 400 V.

Operating conditions

Close-coupled vertical in-line pumps

LVI

Sound/Noise Levels

As shown in the table below the motor noise levels will not exceed the maximum sound pressure level [db(A)] as per ISO 3743.

Motor kW	Maximum sound pressure level [db(A)]-ISO 3743		
	Three-phase motors		
	2-pole	4-pole	6-pole
0.37	56	45	-
0.55	57	42	40
0.75	56	42	43
1.10	59	50	43
1.50	58	50	47
2.20	60	52	52
3.00	59	52	63
4.00	63	54	63
5.50	63	62	63
7.50	68	62	66
11.0	70	66	66
15.0	70	66	66
18.5	70	63	66
22.0	70	63	66
30.0	71	65	59
37.0	71	66	60
45.0	71	66	58
55.0	71	67	58
75.0	73	70	61
90.0	73	70	61
110.0	76	70	61
132.0	76	70	61

Ambient temperature and altitude

The ambient temperature for proper motor operation must not exceed.

- + 45°C for EFF2 motors
- + 60°C for EFF1 motors.

In case of ambient temperature exceeding 45°C (or 60°C for EFF1) or if motor is to be installed more than 1000 metres above sea level then a higher output motor should be selected due to low cooling effect. Please refer the chart as shown in fig. 5 for selection of the motors at higher temperature or altitude.

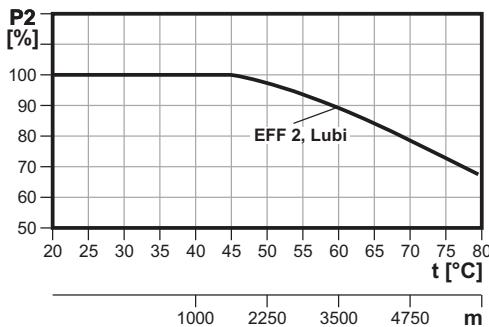

Fig. 5 Motor P2 depend on temperature/altitude

Example

A 15 kw motors has to be increased in output to 18.5 kw if ambient temperature is 60°C.

A 15 kw motors has to be increased in output to 18.5 kw if it has to operate at 3500 meters above mean sea level.

Pump location

The pumps have been designed to operate in non aggressive and non explosive atmosphere.

The relative humidity should not exceed 95%.

Pumped liquids

LVI pumps are designed for non explosive liquids which are clean, and thin without any solid particles.

A viscous liquid affects the pump performance in the following ways.

- The power consumption of the pump will increase with increase in viscosity. This will require a larger motor for the pump.
- Head, discharge & pump efficiency will reduce.

A liquid with high density will also affect the performance as follows.

- The power consumption will increase at a ratio corresponding to increase in density. For example a liquid with a specific gravity of 1.30 will require 30% larger motor to drive the pump.
- The head discharge and pump efficiency will not change with change in density.

Liquid temperature

The LVI pump range covers the temperature range from 0°C to +140°C.

The permissible liquid temperature depends on the type of mechanical shaft seal furnished on the pump.

Please refer the table showing relationship between mechanical shaft seal & temperature.

The maximum liquid temperature is stamped on the nameplate of the pump.

Relationship between shaft seals and temperature

Seal type	Code	Temperature range
Carbon/Ceramic/NBR/S.S.304	1	0°C to +90°C
Sic/Sic/Viton/S.S.316	2	0°C to +90°C
Carbon/Sic/Viton/S.S.316	3	0°C to +140°C

Inlet pressure

- The inlet pressure + shut off pressure (pressure of pump against closed valve) should not exceed the maximum operating pressure of the pump.
- The minimum inlet pressure must be according to the NPSH curve + 0.5 meters safety margin + correction of vapour pressure.
